Dimethyl 1,3-dichloro-8-phenyl-5-phenylsulfanyloquinoline-6,7-dicarboxylate

H.-K. Fun, A. Usman, I. A. Razak, S. Chantrapromma, T. K. Sarkar, S. Basak and N. Panda

Abstract: In the title molecule, $C_{25}H_{17}Cl_2NO_4S$, one of the phenyl rings is nearly perpendicular to the isoquinoline moiety. The angle subtended at the S atom joining another phenyl ring to the isoquinoline is $102.2(1)^\circ$. The extended structure is built from infinite molecular chains parallel to the *b* axis which are stabilized by C-H...O hydrogen bonds.
